User manual

WARNING!

A. Verify that the product has not been damaged during shipping when unpacking the product. If damages are discovered, report in that case, to the delivery company.
B. Read the technical instructions before installing the bath
C. We are not responsible for product malfunction or damages if our instructions are not followed during installation.
D. Read the users instructions before using the bath
E. For safety, energy consumption and cleanliness, we recommend using a safe and effective cover when the bath is not in use and during heating.
F. Do not leave children in the bath without supervision
G. **ATTENTION**! If the hot tub will be countersunk e.g. in a terrace it is necessary that the access is not obstructed in any way order to be able to service it. Service hatches should be removable without a problem.
H. If automatic dispensers (floating, etc.) are used, careful adjustment should be made to avoid incorrect dosage. Follow the recommendations in our instructions.
I. Check the quality of the water, as well as temperature and function, regularly, don't leave the spa unmonitored for long time periods.

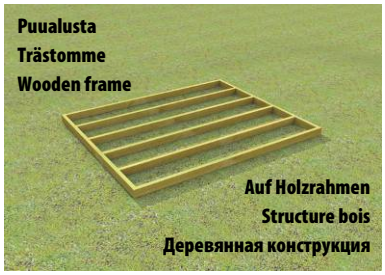
Maintenance instructions

Thank you for choosing a SpaDealers Hot Tub. We try to do our utmost to ensure that you will be satisfied with our products. If you have any queries, please contact us at +358-(0)10-239 5600 or info@spadealers.fi

Foundation and placement options



Place the Hot Tub on a stable base and not directly on the ground.

Maintenance

The wood on the outside must be treated with wood oil annually. The oil must be suitable for hard wood or heat treated wood and provide UV protection. It would be also good if it contains a slight brownish nuance in order to provide more protection.

Untreated **Oiled** **Untreated > 3 years**

Water consumption and energy!

Filling is generally done with a garden hose connected to the water mains. If another water source is used, take special consideration regarding the potential for bacteria. Read the instructions on water hygiene and the use of chemicals.

Remember that the water level will rise by approx. 5 cm when an average-sized person sits in the Hot Tub. This is equivalent to 80 litres of water. The water level should be 20 cm below the edge when empty. The total amount of water to heat up is subsequently reduced by ca. 200 litres. If the Hot Tub is completely filled, this amount of water will flood over the edges when the users sit down.

Cleaning the hot tub - After the water has been used in a hot tub so it should be emptied out. The hot tub is then rinsed out with clean fresh water. The water has been in a long time, it should also be scrubbed with eg pine soap. If you have a stove from SpaDealers so it should always be emptied of water.

Heating device

Always read the separate instructions supplied with the heating device, for example, wood stove or gas heater. Be sure to follow them and take also into account the possible risk of freezing.

Managed correctly, you will bathe in a SpaDealers hot tub for many years.

We wish you many wonderful bathing days.
