

Replacing the LED light control on TopSpa XS

Remove the 4 screws from the control box.

Use the box cutter knife set to 5cm depth and cut the insulation carefully, as shown.

Remove the wires from the insulation, unscrew the nut retaining the control panel for the LED light and disconnect the wires.

Reassembly

Insert the new control through the hole as well as the retaining nut. Here also apply silicone to the cut in the insulation.

Put the insulation back in place and reinstall the cover panel.

Reconnect the control wires.
